LAXMI NARAYAN SAHOO

Java Backend Developer | Spring Boot | REST APIs | PostgreSQL

Phone: 7855893140 | Email: pupunsahoo961@gmail.com

GitHub: github.com/PUPUN-SAHOO | LinkedIn: linkedin.com/in/laxminarayansahoo

PROFESSIONAL SUMMARY

Java Backend Developer (MCA) skilled in building secure, database-driven REST APIs with Java, Spring Boot, Spring Data JPA, Hibernate, Spring Security and PostgreSQL. Built the complete backend of SmartPaw, a QR-based animal identification and lost-pet recovery web platform with role-based access control, photo upload and GPS location features, deployed live on Render. Strong in Core Java, OOP, Collections, SQL and Data Structures & Algorithms. Seeking a Java Backend Developer role.

TECHNICAL SKILLS

Programming Languages: Java, SQL
Backend Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Hibernate, JDBC
API Development: RESTful APIs, JSON, HTTP Methods, CRUD Operations, Layered Architecture, Dependency Injection
Security: Spring Security, Session-Based Authentication, Role-Based Access Control (RBAC)
Databases: PostgreSQL, Oracle 21c, MySQL
Core Java: OOP, Collections Framework, Exception Handling, Multithreading, JVM, String Processing
Computer Science: Data Structures & Algorithms, Problem Solving
Tools & Platforms: Maven, Git, GitHub, Eclipse, Apache Tomcat, Cloudinary, Render, Neon

PROJECTS

SmartPaw - QR-Based Animal Identification & Recovery Platform | Backend Developer

Java, Spring Boot, Spring Security, Spring Data JPA, Hibernate, PostgreSQL, Cloudinary, REST APIs | *Live Demo*

- Architected and developed the complete backend of a full-stack web platform for animal identification, owner management and lost-pet recovery; integrated the frontend built by a teammate through REST APIs.
- Engineered REST APIs across 6 core modules: animal profiles, QR-based identification, user authentication, GPS location, medical records and lost/found management.
- Secured the application with Spring Security session-based authentication and 2 access roles (Owner, Admin) using role-based access control to protect endpoints and user data.
- Modelled the relational schema and persisted users, owners, animals and related records in PostgreSQL (Neon) using Spring Data JPA and Hibernate.
- Integrated Cloudinary for animal photo upload and enabled public QR profile pages so finders can view animal details, including medical certificates, without installing any app.
- Deployed the backend on Render and managed database and Cloudinary credentials through environment variables instead of hard-coded secrets.
- Developing an AI-powered SmartPaw Assistant that collects animal details through conversation and saves them to the backend after user confirmation.

Movie Database Application | Java, JDBC, SQL

- Developed a CRUD application to add, update, delete, view and search movie records using JDBC connectivity and SQL queries.
- Applied OOP principles and organised the code into separate data-access and application logic classes for maintainability.

ATS Resume Checker | Java, Collections

- Created a keyword-based resume screening tool that compares a resume with a job description and generates a match score.
- Utilised Java Collections (Set, Map, List) and string processing to extract keywords and calculate matching percentage.

EDUCATION

Master of Computer Applications (MCA) - BPUT | 2022 - 2024
Bachelor of Computer Applications (BCA) - Utkal University | 2019 - 2022
